

Answer Key

- 1. b) Support Vector Machine**
- 2. b) To maximize the margin between classes**
- 3. c) The data points closest to the decision boundary**
- 4. b) It prevents features with larger ranges from dominating the model**
- 5. c) RBF (Radial Basis Function) kernel**
- 6. c) 77-99%**
- 7. c) To handle non-linear data by projecting it to higher dimensions**
- 8. c) The border with the widest demilitarized zone (maximum margin)**
- 9. b) Distance calculations**
- 10. b) Projecting data into a higher-dimensional space**
